

A COMPLETE ECO-FRIENDLY SOLUTION FOR THE PUBLIC SPACES OF TOMORROW.

As part of its commitment to sustainability, **Equiparc** is expanding its single- and double-stream waste receptacle offering with a complete solution featuring two triple-stream waste receptacle models.

These new configurations, EP-3300-T and EP-3320-T, feature three separate compartments to optimize waste management and reduce contamination of recyclable materials. Designed to meet evolving environmental standards and requirements, these models encourage source separation and help support municipal sustainability goals.

Available with several coating and paint options, our models include the EP-3300-T, with an 83 L capacity, and the EP-3320-T, offering a 100 L capacity for high-traffic public spaces. Designed to blend seamlessly into a variety of environments, these receptacles facilitate the collection and removal of materials while helping create clean, functional, and sustainable spaces.
